WELCOME TO DAYSTATE

Welcome to the 2026/27 Daystate range. For more than four decades we've led the world in creating advanced precharged pneumatic air rifles.

Our range brings together proven best-sellers - refined with the latest design and technology - alongside exciting new rifles like the incredible Blackwolf.

From the very beginning of the modern precharged pneumatic rifle, Daystate has led the way in airgun technology. That pioneering spirit still drives us today. Every day we push beyond the limits others accept, designing and building innovative, high-performance air rifles that raise the bar for the entire industry.

Proudly rooted in British engineering, every rifle that leaves our UK factory carries the heritage, precision and craftsmanship that define Daystate.

Being first matters - but being the best matters more. From groundbreaking computer-controlled systems to continually refined mechanical actions, we are relentless in our pursuit of performance. Each rifle is hand-built to deliver the power, consistency and accuracy our customers expect - so whether you're hunting or target shooting, you can always perform at your very best.

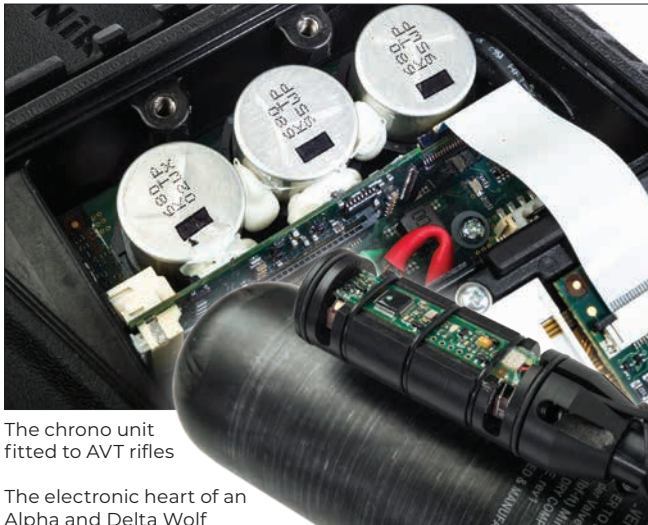

DAYSTATE
TECHNOLOGY

THE FOREFRONT OF INNOVATION

Inside the beautiful exterior of a Daystate rifle is lists of cutting-edge technology. Designs and specifications are constantly updated, and every new model incorporates new and exciting innovations. Unlike many companies who must make everything in-house to save money, Daystate uses industry leaders, such as German **Lothar Walther**, Dutch **Huma Air**, Italian **Minelli Stocks** and Britain's **PRS Accessories**, to ensure every Daystate rifle is the best it can be.

ADVANCED VELOCITY TECHNOLOGY (AVT)

The Advanced Velocity Technology (AVT) electronic firing control system used in the Alpha and Delta Wolf is operated through a colour touchscreen display. For the most advanced air gun of all time, look no further than the AVT system fitted to these rifles.

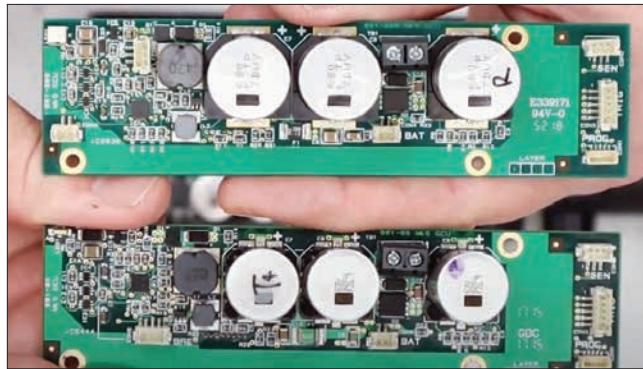

The chrono unit fitted to AVT rifles

The electronic heart of an Alpha and Delta Wolf

MAPPED COMPENSATED TECHNOLOGY (MCT)

A simpler and highly rated Mapped Compensated Technology (MCT) electronic system is fitted to the Red Wolf series of rifles. A digital microprocessor and solenoid-powered air valve monitors and controls every microsecond of the firing cycle to ensure unrivalled shot-to-shot consistency, increased shot-count and reduced action movement. All the attributes which, ultimately, translate into improved accuracy.

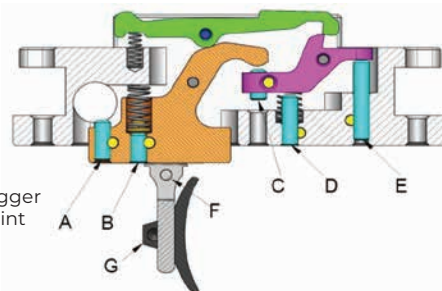

The MCT-boards fitted inside a Red Wolf

BLACKWOLF

Daystate's new Blackwolf incorporates everything we've learned in nearly 50 years of mechanical rifle development.

Volumax secondary chamber extensions for Blackwolf TAC

The Blackwolf trigger features eight-point adjustment from 8oz up to 3 lbs

REGULATORS

A regulator is a small, high-pressure device fitted to Daystate rifles that regulates the air pressure in a precharged pneumatic airgun.

The regulator reduces the primary high pressure to a lower, constant, pre-set pressure needed to achieve the required pellet/slug speed. This produces the same velocity and point-of-impact, shot after shot.

Daystate's technologically advanced regulator precisely meters air-release to totally eradicate any power curve and ensure minimal shot-to-shot deviation as the rifle cycles through its usable air charge – both important factors in improving downrange accuracy.

Daystate's Huma-Air Regulator

Daystates feature a regulator gauge

BARRELS

Daystate uses barrels that are developed and then tested by our own Accuracy Research Team (ART), a group of airgun enthusiasts and factory specialists whose aim is to develop the most accurate pellet and slug barrels available on the market today. Barrels are matched to rifles' performance with different lengths, twist rates and profiling styles to ensure the ultimate in performance.

Daystate's ART barrel

DAYSTATE ART

Even for a gunmaker as inventive as Daystate, developing the next generation of air rifles takes more than innovation, ingenuity and investment – it requires commitment and a constant pursuit of perfection. That's why, in 2018, we established our Accuracy Research Team (ART).

The ART program ensures every new rifle coming off the drawing board proceeds through its development and manufacturing stages to deliver the highest standards of accuracy that, as industry leader, Daystate sets itself.

THE ART BARREL

Our ART barrel far exceeds the accuracy potential of anything until now and is fitted as standard across the high-power (HP) range. A rolling development by the ART team is focused on improving the accuracy and slug and pellet compatibility of all barrels.

DAYSTATE UPDATES

Daystate never rests on its past achievements; rifles are constantly developed and improved. And with platforms such as the modular Blackwolf series, Daystate ensures owners can benefit from performance improvements by supplying updates to bring existing rifles right up to date with the latest developments. This can be either via free-to-download software, or the ability to purchase retrofittable upgrades of key components.

PERFORMANCE CENTER

Owning one of the best air rifles in the world is one thing, but many of us like to customise and fine-tune our set up either to stand out from the crowd or to better suit personal tastes and shooting styles. Now Daystate has made things a lot easier by releasing its Performance Center catalog.

The online catalogue brings together in one place more than 600 parts and accessories for the Daystate and BRK ranges as well as MTC Optics. Each one is designed, developed, and tested to the companies' exacting standards and available from either of the companies' main distribution centers to reduce customer postage costs.

DAYSTATE
BLACKWOLF

ENGINEERED ART

The Blackwolf is more than just an air rifle. It's a fully modular shooting platform designed to evolve with you.

Start with the rifle that suits your needs today—then adapt, upgrade and reconfigure it tomorrow. With interchangeable components, adjustable power systems and multiple stock options, the Blackwolf can become exactly the rifle you need for any discipline.

Featuring 16 unique innovations never before combined in a single Daystate rifle, the Blackwolf showcases engineering excellence in every detail. Yet performance isn't the only focus. Decades of design expertise have gone into creating a rifle that looks as exceptional as it performs.

That's why we call the Blackwolf: ENGINEERED ART.

Key Features

Modular platform design

Slug-compatible (HP models)

New 8-point adjustable trigger (8oz–3.5lbs)

Interchangeable barrels and calibers

Fast-change tensioned ART barrel system

20-stage power adjuster with interchangeable hammer springs

Ambidextrous side lever

AR-style safety lever

Trajectory compensated Picatinny scope rail

Adjustable cheekpiece and butt pad

Bottle or cylinder air options

Revolutionary titanium firing valve system

Interchangeable stocks – Carbon Grey, Laminate, Walnut, Tactical Chassis

Largest regulator chamber ever fitted to a Daystate rifle

Upgradeable for future power increases

In its UK 12 ft/lbs configuration, the Blackwolf is compact, balanced and highly responsive. Available in .177 or .22, it measures just 980mm and weighs as little as 2.9kg, delivering instinctive handling and superb control.

High-Power Performance

Higher-powered models unlock the Blackwolf's full potential. The rifle features the largest regulator chamber ever fitted to a Daystate, providing exceptional consistency and efficiency.

A 20-position thumb-adjustable power wheel works through a progressive shaft, allowing precise adjustment of hammer spring tension for your chosen setup.

Multiple Rifles in One

Changing calibers and barrel lengths takes only minutes—a system first introduced on the Delta Wolf. With multiple barrel options across four calibers, the Blackwolf can be configured for a variety of shooting disciplines.

Hammer springs, spring tension and regulator pressure can all be adjusted quickly, allowing precise tuning for different power levels and projectiles.

With the 711mm slug barrel fitted, the Blackwolf becomes fully slug-compatible.

Built for the Future

The Blackwolf Zero (2026) continues Daystate's modular philosophy, offering a base rifle that can be configured with components from the company's extensive range of accessories.

One platform. Endless possibilities.

 with air cylinder

Blackwolf Grey Laminate
 HiLite

BLACKWOLF | MODULAR RIFLE SYSTEM

MODULAR PLATFORM DESIGN

Interchangeable componentry throughout lets you build the exact rifle you want for every shooting need, from hunting to target work. One gun, multiple personalities.

SLUG COMPATIBLE

There's even a special, 711mm-long barrel developed especially for slugs.

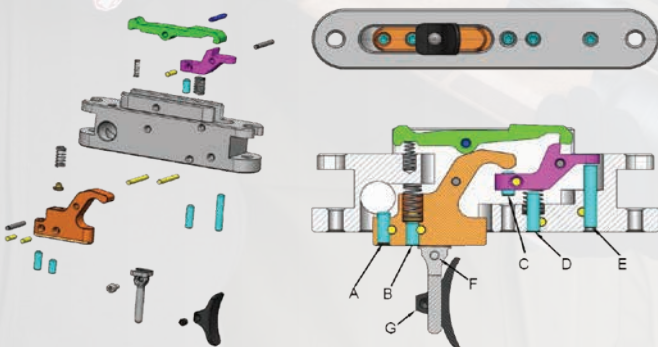

Full barrel kit

Barrel with tensioner and probe

NEW EIGHT-POINT ADJUSTABLE TRIGGER

With pull-weight settings from 8oz to 3.5lbs (225g - 1.6kg), you can choose to suit your trigger finger as well as the rifle's intended discipline. Besides travel and weight, the blade is also adjustable for position in the X, Y and Z planes.

FAST CHANGE CALIBER SWAP

Blackwolf barrels are designed to be easily removable for fast switching to different calibers or lengths to meet your shooting needs.

TENSIONED 'ART' BARREL SYSTEM

Developed by our Accuracy Research Team (ART), a tensioning system is used to increase barrel rigidity and improve extreme long-range accuracy.

20-STAGE INTEGRAL POWER ADJUSTER

Allows on-the-fly adjustments by simply rotating a numbered wheel. So you can set the rifle's output to suit both the shooting situation and the pellet/slug type.

LOW PROFILE FOR BETTER TARGET ALIGNMENT

We made the Blackwolf's trigger-to-barrel center closer to improve 'pointability' and handling.

AMBIDEXTROUS

We made the Blackwolf's stock ambidextrous, so why wouldn't we make its sidelever cocking system swappable too? Left side or right - you choose... and it only takes a few minutes and a couple of hex keys.

AR-STYLE SAFETY CATCH LEVER

Reversible or removable (in a couple of minutes) to suit your shooting configuration, the Blackwolf's safety is perfectly positioned for ergonomic efficiency.

ANGLED PICATINNY SCOPE RAIL

Offering a sturdier mounting platform than conventional airgun 'dovetails', and more appropriate for modern digital and thermal scopes. Blackwolf's 21mm rail is precision machined with a 0.3-degree (20MOA) downward 'tilt' to improve scope alignment at longer ranges.

ADJUSTABLE CHEEKPIECE AND BUTT PAD

Not just to suit right- and left-handed shooting, the Blackwolf's height adjustable cheek and butt means you can dial in a personally tailored gunfit to suit your stance, equipment and discipline.

BOTTLE OR CYLINDER OPTIONS

The Blackwolf models are offered in both HiLite carbon bottle and alloy cylinder configurations to suit your preference for balance, shot-count and look.

TITANIUM FIRING VALVE SYSTEM

Lightweight titanium reduces valve weight and maintains incredible strength in operation. This results in less inertia for a smoother firing cycle, and faster closing to increase available energy and improve the shot count.

REGULATED LIKE NO OTHER

The Blackwolf's design incorporates the largest regulator chamber of any Daystate PCP model to ensure repeatable shot-to-shot consistency, regardless of the power level your rifle's set at and ambient climatic conditions.

UPGRADABLE PLATFORM

The Blackwolf's modular design is not just versatile, it's also future-proofed. Our ongoing R&D commitment to the new Blackwolf platform means you'll be able to enjoy retrofittable upgrades to its power delivery system as and when we release them.

INTERCHANGEABLE STOCKS

Choose your Blackwolf's livery from five options: Carbon Grey, Walnut, Laminate (grey/black wood), 'TAC' and Zero multi-adjustable Tactical chassis's.

DAYSTATE
HUNTSMAN REVERE

TRADITIONAL CLASSIC ELEGANCE

Daystate's Huntsman series is one of the most iconic lines in the airgun world, and the Huntsman Revere is the latest in this long history, featuring a sidelever action and Huma-Air regulator.

Additionally, the Huntsman Revere sports an action optimised to work with both a superb gate loading self-indexing magazine system and Daystate's latest single-shot loading tray.

Needless to say, the Huntsman Revere sports all the features that have made the marque a benchmark for PCP sporter design, including a shrouded match-grade barrel, two-stage adjustable trigger and a choice of stocks; from a beautiful hand oiled Turkish walnut, which is available in a true right or left handed configuration, though to the Safari Edition's tactile, raised-grain wood stock. Fully ambidextrous, the 'high grip' Safari model's properties are augmented by an adjustable cheek-piece. Both stocks cradle a low seated action to maximise handling.

DAYSTATE
**DELTA WOLF &
DELTA WOLF SMART**

THE MOST ADVANCED BULLPUP
OF ALL TIME

Building on more than two decades of electronic expertise, Daystate has taken the concept of electronically controlled precharged air rifles to a new level. The Delta Wolf incorporates touchscreen controlled Advanced Velocity Technology (AVT) which enables the selection of pre-set caliber-specific power levels. An integral chronograph communicates with the onboard electronic brain to make on-the-fly adjustments that maximise consistency and enable performance to be fine-tuned according to the shooter's needs and different ammunition. In addition, manual adjustment to the Huma-Air regulator pressure to exploit the benefits of a large secondary chamber enables exact velocities to be dialled in on high-power models.

The latest Ultra-Fast Flow valve improves efficiency and shot count from the removable 480cc or 580cc carbon bottle. The rifle's magazine can be inserted from either side of the breech and is cycled with a side lever that can be swapped to the left side of the rifle in just two minutes. Inserting two magazines back-to-back doubles your payload.

For further flexibility and to allow for free software updates, Delta Wolf can be plugged-in to a Microsoft Windows computer using the optional DTD (Data Transfer Device). This not only provides access to an infinite array of adjustment to the firing system, but it keeps the rifle's firmware fully

up to date. As well as technological advances, there are ambidextrous AR style safety catches, under and side-mounted Picatinny accessory rails and a sloped Picatinny scope rail that can be moved by as much as 150mm along the rifle to achieve perfect eye relief for both large and short scopes. Additional adjustments to the butt pad ensure perfect eye adjustment, while other aspects of gun fit can be catered for courtesy of a whole range of accessories exclusively developed for the Delta Wolf.

SMART MODEL

At Daystate, we never sit back and admire what has gone before; we're always looking to improve. The Delta Wolf's electronic platform means we can offer versions of the rifle tuned to shooters' needs. However, not everyone needs the ability to fine-tune to such a high level. For these shooters we offer the Delta Wolf SMART version with simpler programming and the chronograph removed. Revised power settings allow adjustment in percentage increments. These revisions make the rifle simpler to operate at a highly competitive price. And if desired, the chronograph module can be added at a later date.

The Delta Wolf is available in a Bronze finish

DAYSTATE
**ALPHA WOLF &
ALPHA WOLF SMART**

THE MOST ADVANCED AIR RIFLE
OF ALL TIME

The Alpha Wolf sits alongside the highly acclaimed Delta Wolf in the current line-up of world-leading, user-programmable electronic air rifles.

Daystate's investment in computerised precharged pneumatic airguns mean its rolling development programme is designed to enable owners of these rifles to benefit from future emerging technologies, new features, and performance upgrades.

The Alpha Wolf takes things a step further by offering all this in a stylish, new package. In short, the world's most advanced air rifle is available in more formats. Alpha Wolf's individuality is immediately obvious courtesy of a beautifully sculpted, red laminate stock with extended forend lip and new-look Picatinny optic rail, complete with anti-cant bubble and position-adjustable to accept a multitude of day/night scope set-ups.

Elsewhere, the Alpha Wolf maintains the high-end features of the Delta Wolf: onboard chronograph, quick and easy caliber swap out, touchscreen programming and Microsoft Windows platform synchronization. A Huma-Air regulator, double magazine system, adjustable cheek and butt pad, fully-adjustable trigger operation and blade position, carbon-fibre bottle and multiple accessory rails rounds out the package.

Alpha Wolf features a specially developed ART barrel system that can be ordered separately to allow caliber and power changes in minutes giving amazing flexibility to the design.

SMART MODEL

The Alpha Wolf's electronic platform means we can offer versions of the rifle tuned to shooters' needs. However, not every shooter needs the ability to fine-tune to such a high level. For these shooters, we offer the Alpha Wolf SMART version with simpler programming and the chronograph removed. Revised power settings allow adjustment in percentage increments. These revisions make the rifle simpler to operate at a highly competitive price. And if desired, the chronograph module can be added at a later date.

DAYSTATE
ALPHA WOLF & DELTA WOLF
PERFORMANCE

EVOLUTION IN AIRGUNNING

Already considered the most advanced PCP air rifle in the world, Daystate's new Alpha and Delta Wolf Performance versions incorporate an improved airflow to deliver more muzzle energy in its HP (High Power) guise. This makes our latest models the most powerful Alpha and Delta Wolves yet.

The Alpha Wolf Performance comes with more distinctive, two-tone woodwork. Made from red and grey laminate, the Performance stock also sports a stylish new black-burst finish on its forend lip. This perfectly complements the practical Picatinny accessory rail.

And at the other end, both Performance models also feature our new Gecko, anti-slip ventilated butt pad. This is 10mm deeper and has also been machined from composite using the latest, state-of-the-art 3D manufacturing processes.

The Delta Wolf Performance model goes further with a new target grip and forend rail.

Of course, both Performance models still incorporate all the groundbreaking technologies that have made the user-programmable Alpha and Delta Wolf electronic PCP air rifle the most advanced airguns on the planet. These include its user-programmable, computerised action, colour touchscreen, integral chronograph, full electronic firing cycle and adjustable factory-fitted HUMA-Air regulator. Both Alpha Wolf and Delta Wolf Performance models retain the capability to integrate with a laptop or PC and have a range of accessories available through our Performance Center.

ALPHA WOLF BLUE SPECIAL EDITION

Alpha Wolf, the world's most advanced air rifle, offers unrivalled performance, but for those who really want to be noticed on the range and competition circuit, Daystate has launched a striking Alpha Wolf Blue Special Edition.

Though not limited in terms of number of rifles, the Alpha Wolf Blue Special Edition is only available for a limited period in both 12 ft/lbs and FAC/export output.

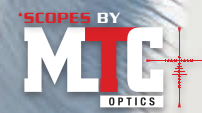

The 17-inch barrel model is available in .177 and .22 whilst the 23-inch barrel Alpha Wolf Blue Special Edition HP adds .25 and .30 options.

In addition to the striking blue and grey laminate stock and metal work, the Alpha Wolf Blue Edition has a specially designed cocking handle and comes with a blue Odb silencer, hard case with a special edition plaque and a tin of the test Rangemaster pellets.

Also included is a Data Transfer Device (DTD) allowing the rifle's software to be upgraded with free updates and to enable backups and custom programming via a Windows PC or laptop.

In all other regards, the Alpha Wolf Blue Special Edition is crammed full of the advanced features shooters of the world's most advanced air rifle already enjoy, including a built-in chronograph, Huma-Air regulator, electronic trigger and firing action and touch-screen accessible adjustments and functions.

DAYSTATE
RED WOLF &
RED WOLF HIGH POWER

A WOLF WITH MORE 'BYTE'

Every now and then, an airgun manufacturer develops a rifle that changes the trajectory of the entire industry. Since its introduction, the Red Wolf has, indeed, changed the way people think about electronic action airguns. Elegant, yet practical, its stock may be - but it's under the skin that the Red Wolf claims its position as the leader of the pack.

Coming loaded with Daystate's tried and tested MCT technology, the Red Wolf is able to exploit all the advantages of a fully-electronically fired airgun to establish a pedigree as one of the finest rifles ever made. Digitally regulated for a super-consistent high shot-count and sporting a trigger that incorporates adjustability of both release and finger placement, the Red Wolf delivers match-standard accuracy at the very extremes of airgun ranges. Its masterfully sculpted stock comes in a variety of colours and materials that include red laminate, blue laminate (Midnight Edition), Walnut and, surely a hunters' choice, a highly practical textured 'Safari' finish. A range of Precision Rifle Systems (PRS) accessories is available as extras. However it's dressed though, the Red Wolf's ambidextrous design ensures a perfect gun fit courtesy of a butt pad and raised cheekpiece, both fully adjustable.

Aiding the Red Wolf's user-friendly handling is a lightweight carbon fibre bottle, above which sits an ART (Accuracy Research Team) barrel available in 430 and 600mm lengths. Both length barrels are fully shrouded with a built-in carbon moderator to mute muzzle report in the field. As you would expect, the Red Wolf's sidelever design marries effortless cocking with speedy loading courtesy of Daystate's latest generation of higher capacity self-indexing magazines. In looks, handling and performance, the Red Wolf is pure airgun artistry.

DAYSTATE
RED WOLF GRAND PRIX

THE PERFECTION OF PRECISION

The Red Wolf Grand Prix redefines what Extreme Benchrest and other competition shooters thought was possible, with the new GP stock adding a new dimension to Daystate's already match-winning Red Wolf rifle.

The Red Wolf Grand Prix builds on the core DNA of the Red Wolf and adds more adjustability to deliver the next level in competition shooting. The technical sophistication of the electronic action is coupled with a state-of-the-art stock developed by Precision Rifle Systems (PRS). An array of features, including quick adjustment to the cheek rest, forend rail and full-length Picatinny rail, as well as a comprehensive range of accessories, bring every conceivable benefit to the shooter, whether faced with sitting, prone, kneeling or standing shots.

In addition, the Red Wolf Grand Prix's fully electronic action is matched to an electronic trigger that can be finely-tuned whilst remaining completely safe. A Liquid Cristal Display screen provides vital information on the rifle's status, such as which of its three power setting is selected, remaining pressure, shot count and battery voltage.

DAYSTATE
T2 300BAR COMPRESSOR

Ideal for gun shops, shooting clubs or the PCP airgunner who values independence, Daystate's improved Type 2 electric air compressor takes the effort out of charging up a precharged pneumatic rifle or scuba tank.

A sophisticated, superior air filtration system delivers breathing quality air courtesy of a very quiet charging operation. The T2 fills a 10-litre 300BAR (4,350psi) scuba tank from empty in just 30 minutes - but it will top it up from 150BAR (2,175psi) in less than 15 minutes.

Portable, self-contained and robust, it's fitted with a large, easy-to-read pressure gauge that can be specifically set to automatically stop the charging process when the required pressure has been reached. The Type 2 also features a run-time counter to assist with servicing schedules.

Power	2.2kW
Voltage	110v or 230v
Delivery rate	80 litres/minute
Noise	91db
Weight	94.8lbs (43kg)
Dimensions	27 x 15 x 19ins (68.6 x 38.1 x 48.3cm)

DAYSTATE
T3 LIGHTWEIGHT COMPRESSOR

THERE IS A CHANGE IN THE AIR

Daystate's new T3 'Super Leggero' compressor is 30% lighter than the T2, yet still retains many of its key features, making the lighter SL compressor the best choice for shooters wanting a more portable and cost-effective solution to becoming air independent.

The T3 Super Leggero compressor is fitted with a large, easy-to-read pressure gauge allowing you to monitor output and features an auto switch-off when the maximum pressure is achieved. To assist servicing, the unit contains a run-time counter.

Power	1.1kW
Voltage	110v or 230v
Delivery rate	40 litres/minute
Noise	91db
Weight	61.7lbs (28kg)
Dimensions	25.6 x 13.8 x 15.4ins (65 x 35 x 39cm)

RANGEMASTER PELLETS

No matter what make or model of air rifle you shoot, your pellet choice has a key bearing on downrange accuracy and power. That's why Rangemaster has partnered with renowned pellet manufacturers all over the world, including the famous companies of JSB and H&N Sport, to develop a range of ballistically superior airgun ammo.

Precision-made to exacting tolerances, the Rangemaster line offers a multitude of calibers and weights to cater for all air rifle shooting disciplines, across the full spectrum of power levels. Suitable for all makes and types of air rifle, Rangemaster pellets are supplied in easily identifiable, colour-coded tins to make it easy for you to pick the pellet that best suits your shooting requirements.

Rangemaster - for when you don't want to compromise your rifle's downrange performance.

TYPE	CALIBER	WEIGHT	MAX ENERGY	USE
SOVEREIGN	.177" (4.5mm)	8.44gr (.547g)	Up to 18ft/lbs (24J)	Field Target

EMPEROR	.30" (7.62mm)	50.15gr (3.25g)	Up to 110ft/lbs (150J)	Hunting

RANGEMASTER JUGGERNAUT

Manufactured for Daystate by JSB, the Rangemaster Juggernaut hollow point airgun slug is Rangemaster's solution for long-range airgun shooting, producing phenomenal accuracy right out to 100 meters and beyond. The range is suitable for general shooting, benchrest and long-range hunting in precharged air rifles that can produce at least 40ft/lbs of energy. This bullet shaped slug is engineered specifically for airgun barrels, such as the 600mm polygon ART barrel fitted to Daystate and BRK rifles, and other high-power rifles fitted with slight- or no-choked barrels. Trials have shown many slugs to be 'barrel fussy' and to show inconsistent results. Rangemaster has worked hard with its ART development team to select a design and weight that offers great all-round performance.

CALIBER	WEIGHT	MAX ENERGY	USE
.22" (5.5mm)	25.39gr (1.645g)	Up to 75ft/lbs (122J)	High Power Field Target, Extreme Benchrest and hunting
.25" (6.35mm)	33.95gr (2.2g)	Up to 95ft/lbs (128J)	High Power Field Target, Extreme Benchrest and hunting

OdB SILENCER

THE SCIENCE OF SILENCE

An exciting range of airgun silencers, the OdB performs as impressively as its look suggest.

Externally, stylish flutes work to diffuse air while, internally, a specially developed baffle and mesh system dissipates both noise and air turbulence. This ensures the pellet not only exits a OdB silencer with a barely audible report, but that it begins its downrange journey in the calmest air possible.

Designed in lightweight aluminium and CNC-engineered with the highest quality components, the OdB silencer is female threaded to the industry standard 1/2" UNF fitting.

Each model is also close-machined to match specific bore sizes, thereby maximising sound suppression efficiency. Silencers for .177" (4.5mm), .22" (5.5mm), .25" (6.35mm) and .30" (7.62mm) are distinguished by a star-rating on the OdB's end cap. Effective and beautiful, the OdB silencer is a classy complement as well as the perfect performance upgrade.

MAGNUM OdB SILENCER

To complement the tactical nature and ultimate performance of Daystate's higher power and HP rifles, the Magnum OdB offers the ultimate in sound suppression, even at high power levels.

Magnum OdB

NEW OdB ATP & SSP SYSTEMS

The Ultimate Airgun Barrel Tuner and Silencer

The new OdB Advantage Target Pro (ATP) and Stealth Silencer Pro (SSP) Systems represent the ultimate in airgun silencer and barrel tuner kits. Not only does this system work to improve accuracy, it also works as a sound-suppressor.

Development and design

The ATP incorporates years of data we have collected from our experience in the Extreme Benchrest target shooting arena. By working closely with some of the world's best competition shooters, we have developed a harmonic tuning system to incorporate a sound moderator.

Advantage Target Pro

Shooters can now tune the harmonics of their rifle's barrel for optimum accuracy with the ammo they are using. Tuning is done by hand by rotating the internal weight inside the bronze-coloured tuner housing, making it both quick and easy to achieve the desired setting. Threaded for universal 1/2" UNF fitting, means the tuner will fit air rifle muzzles with a conventional 1/2" UNF male thread. Using a special key, you can add an extra baffle or baffles* to add to the sound suppression.

Stealth Silencer Pro

The SSP is a short silencer with a 1/2" UNF fitting. Using the special key, different caliber inserts* are added. For the best silencing effect, choose the correct insert for the caliber rifle you are using. *Multiple additional silencer baffles can be added to the front end until the desired level of sound suppression is achieved.

OdB MODEL	LENGTH / DIAMETER	WEIGHT	COLOUR
SHORT	4.5" (115mm) / 1.25" (32mm)	3.7oz (106g)	BLACK, SAND, BLUE, RED, ORANGE

*Included is a set of composite baffles for different calibers - .177 / 4.5mm, .22 / 5.5mm, .25 / 6.35mm and .30 / 7.62mm - enabling you to optimise the noise suppressing efficiency according to the caliber of the rifle to which it is fitted, as well as tightening up downrange groups.

DESIGNED BY SHOOTERS FOR SHOOTERS

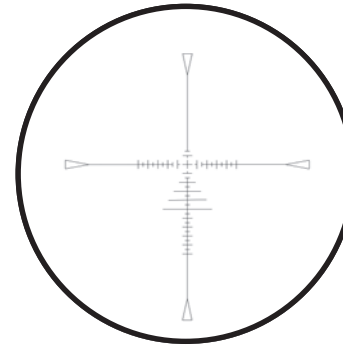

MTC Optics was born because shooters wanted a product that satisfied their specific needs. Its founding philosophy was unreservedly based on the company's connection with grass roots shooters and a drive to provide the most exciting and well-made scopes at a cost shooters could afford.

That philosophy still holds true today, some 20 years since MTC's inception.

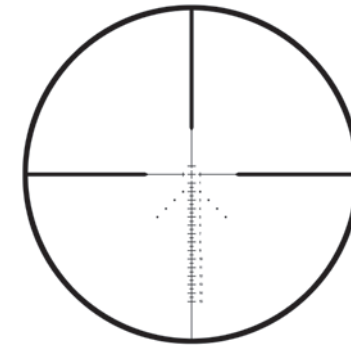

RETICLE FOCAL PLANES

In rifle scope design, the crosshairs can be placed in either the first or second focal plane. Most MTC Optics models have second focal plane reticles, but there are exceptions. Our King Cobra flagship range offers models with either first or second focal plane reticles, designated F1 and F2 respectively. While neither type is necessarily 'better', they each have characteristics that may better suit a shooter's personal requirements.

MTC Optics offers two, exclusively designed reticles in its range - SCB2 and AMD2.

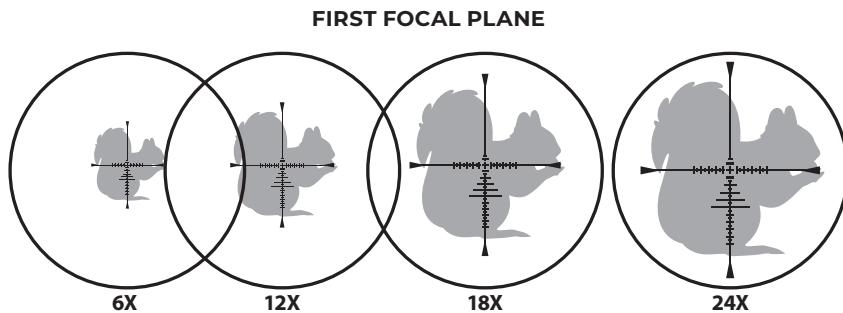

SCB2 Reticle

AMD2 Reticle

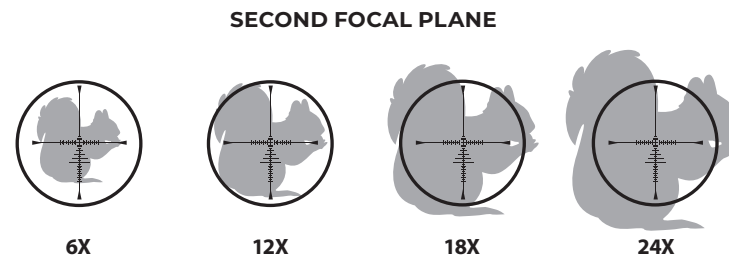

F1 MODELS (FIRST FOCAL PLANE)

As you zoom the magnification in and out, both the reticle and the target will remain in constant proportion. This means the reference points of the reticle always stay the same in relation to the target, regardless of the magnification setting.

F2 MODELS (SECOND FOCAL PLANE)

As you zoom the magnification in and out, the reticle will stay a constant size, but the target will appear larger or smaller. This means the reference points of the reticle can be used to 'bracket' the target at different magnifications – a system that can assist range-finding. *Note: Any MIL-based spacings on the crosshair will only be 'true' at 10x magnification on F2 models.*

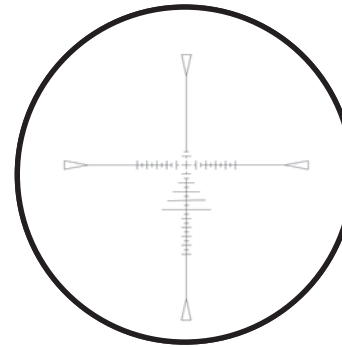

KING COBRA A PERFECT STRIKE IN EVEN THE LOWEST LIGHT

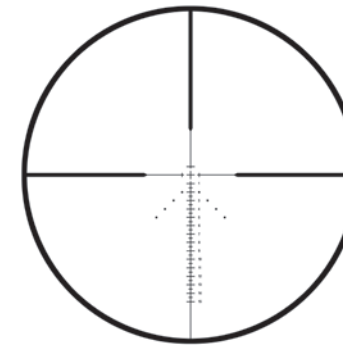

Our King Cobra models offer the keenest sight picture thanks to our use of the best lens multicoating technology. Combined with the versatility of wide zoom magnification and a fast-focus eyepiece, King Cobra rifle scopes give you snake eyes: you'll see the finest of detail, on the smallest of targets, at the longest of ranges.

All King Cobra models offer click-stop adjustments in MILs actuated via lockable, finger adjustable elevation and windage turrets. They also give you a choice between MTC's AMD2 or SCB2 multi-aimpoint reticle, providing numerous aiming points to counter trajectory and windage deviation.

The central crosshair can be illuminated red to one of six brightness levels to suit any lighting scenario. The King Cobra line has models in either the first or second focal plane to maximise light transmission and maintain a bright sight picture, the King Cobra's 30mm tube has been matched to a 50mm objective lens. It features side-mounted parallax adjustment to dial-out parallax error from infinity down to 10 metres – a feature that can also double as a handy rangefinder when used in conjunction with the King Cobra's highest magnification settings.

Copperhead 3-12x44 F2

Copperhead 4-16x44 F2

AMD2 Reticle

COPPERHEAD F2 A SUPER-COMPACT LINE THAT GOES LONG ON PERFORMANCE!

MTC Optics' super-compact Copperhead line – scopes that are considerably shorter and lighter than 'conventional' scopes - makes them more convenient and a better choice for smaller, lighter rifles.

Short in stature doesn't make the Copperhead F2 short in other departments and eye relief is similar to that on traditional scopes. Boasting good light transfer through its coated lenses, the Copperhead is the perfect alternative to the longer, flagship King Cobra when a more compact scope is desirable.

Copperhead scopes offer pull-up/lock-down elevation and windage turrets, side parallax adjustment fastfocus eyepiece and flip-up lens covers.

Furthermore, the Copperhead features MTC Optics' AMD2 reticle for clear and uncluttered range markings out to extreme ranges. It also sports an illuminated central crosshair that can be set to a choice of six brightness settings to perfectly suit the sight picture.

The Copperhead 4-16x44 F2 Safari version

VIPER CONNECT 3-12x32 & 4-16x32

No other scope looks or performs like it! Developed specifically for low recoil PCP airguns, .22 rimfire and .17 HMR rifles, the Viper Connect features super-short eye relief – just 17mm – for a ‘through the lens’ view that effectively brings you a closer, more focused image of your target.

The Viper Connect’s lens array also boosts its field-of-view – almost double, at 10x, compared to a conventional rifle scope.

Its zoom range of 3-12x or 4-16x magnification has been paired to a 32mm diameter objective lens for the brightest of sight pictures in the trickiest of lighting scenarios, and the centre of its reticle can also be illuminated to varying intensities via the top-mounted rheostat.

Finger-adjustable, and resettable, adjustable turrets are protected by screw-off caps and parallax error can be dialled out via a side turret, from infinity down to 10 metres.

A built-in angle indicator on the 4-16x gives you an instant indication of the angle to which your rifle is pointing up or down. The red needle moves with your rifle and displays a number that indicates the percent your rifle is off level.

MAMBA LITE

The Mamba Lite series is for shooters wanting a scope that has all the key features found in MTC's bigger rifle scopes, but in a pared-down package. With a 25mm body tube, these lightweight scopes still retain exceptional light transfer and optical performance.

Even though the Mamba Lite's weight has been shaved, none of this line's features have been compromised: it boasts a fast-focus SCB2 reticle with seven-step central illumination via a push-button interface, semi-target turrets, side parallax from 10m to infinity and magnetic flip covers that incorporate a 2x magnifier pane in the rear cover to assist in reading the vernier.

With rifle scopes seemingly getting bigger and heavier, MTC Optics' Mamba Lite series offers shooters the option to keep their combos light and manageable without compromising their sighting set-up.

BLUEPRINT MOUNTS

A RANGE OF SCOPE MOUNTS TO SUIT ALL SIGHTING APPLICATIONS

To complement the best scopes on the market, MTC Optics offer the best mounts on the market.

The Blueprint line of mounts is wide-ranging, covering a host of two-piece 11/12mm (3/8") and Picatinny (21mm) fitments, both adjustable and fixed height Low, Medium and High, with 25 and 30mm rings. There are also mounts tailored exclusively for MTC's Viper Connect model.

BLUEPRINT ADJUSTABLE AND REACH FORWARD ADJUSTABLE MOUNTS

Made from black-anodised high specification aircraft-quality alloy, these mounts offer height and tilt-adjustment to ensure your MTC scope is perfectly in alignment with the rifle's bore, as well as the target.

Available in pairs of 30mm rings and a choice of 11mm (3/8") or 21mm Picatinny fit. A special reach forward version is also available for those difficult jobs ensuring MTC has a solution for every scope application.

BLUEPRINT 25mm & 30mm

Commonly used on rimfire and air rifles, Blueprint mounts' double-screw fixings avoid 'scope creep' problems often associated with cheaper, inferior quality mounts.

Available with 25 or 30mm rings and a choice of 11mm (3/8") or Picatinny fit. Medium and High models are also available in silver finish.

BLUEPRINT SWAT TORCH MOUNT

A mount capable of accommodating larger modern torches or even a laser with 30mm tubes. Designed to fit either Picatinny scope or accessory rails, the mount holds your torch securely where it's easiest to locate in the dark. Comes complete with an adaptor to fit to MTC's SWAT scopes.

RAPIER BALLISTIC LASER RANGEFINDER

The MTC Optics Rapier can tell you the distance in yards or metres in one of two ways: via its head-up LCD display or relayed verbally into the supplied earpiece courtesy of a wireless module (when linked via your Android/iOS smartphone). In conjunction with a free-to-download app, wireless integration with your smartphone also gives you instant access to a myriad of other useful data – such as scope adjustment in MILs or MOA, what elevation and windage allowance to make and even the required POA for the angle of fire. It's a lot more than 'just another' laser rangefinder.

Adjustable 21mm Picatinny mount

BLACKWOLF MODULAR RIFLE SYSTEM **NEW**

BLACKWOLF IS A TOTALLY NEW PLATFORM
 So you can adapt with the rifle that meets your current needs, so you can adapt with the rifle that meets your current needs, then adapt it later as your requirements change.

With 16 unique features never before seen together in a single Daystate air rifle, BlackWolf embodies engineering excellence throughout.

BlackWolf is available with either a cylinder (C-Type) or pump (P-Type) action, with both hardwood, walnut or laminate stock options. There's also a TAC tactical version of the BlackWolf.

You trust Daystate's quality and manufacture as well as the world leading design and engineering of our BlackWolf to be the rifle which is why we consider the new BlackWolf to be **ENGINEERED ART**

- OFFICIAL SPORTSWEAR & GIFT RANGE 25
- GENERAL ACCESSORIES 27
- RANGEMASTER PELLETS & SLUGS 28

ALPHA WOLF | SHADOW **NEW FOR 2026**
UNRIVALLED ACCURACY

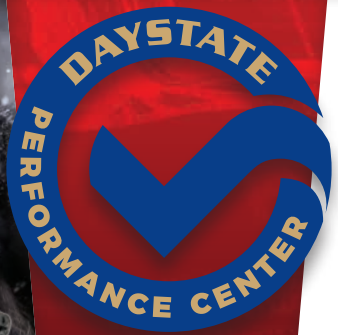

You asked for it, we delivered. The Alpha Wolf Shadow is a new, compact and subtle addition to the Alpha Wolf den. At just 73mm and a little over 3 kgs in weight, the new Shadow features a 300cc carbon-wrapped air bottle and a 40mm air stroke.

The Alpha Wolf Shadow features the same electronic interface as Daystate's SNAKE models, with removal of the charging high reduces overall weight and allows for instant power adjustability at the touch of a screen. This makes it ideal for preventing over-penetration of certain target types when required.

The Alpha Wolf Shadow's short overall length and carbon-optimal handling, combined with a sophisticated and proven electronic action and inertia accuracy, makes it ideal for hunting and pest control. It's especially suited for shooting in confined spaces like farm buildings, holes and from vehicles.

Key features:

- Full IP Luthar Walther barrel
- SNAKE Control electronics
- 40mm Black Ball
- Carbon butt pad
- IPW Air 20 Moderator
- Fitted hard case

DELTA WOLF

- PERFORMANCE RIBBEL CLAMP** £108.00
 Provides additional anti-vibration support for Alpha Wolf and Delta Wolf High Power models. Can also be fitted to TP beam models.
- CHEEK RISER** £7.99
 Easy adjustment of cheekpiece height for correct head position. Direct fit with no modification required.
- DELTA WOLF M-LOCK/ARCA FOREND RAIL** £100.00
 A fantastic accessory for any Delta Wolf. Not only does it offer a full length range of aftermarket accessories, it's in tune with the four existing mounting points and retains the forward trigger guard/factory assembly.
- CENM ADJUSTABLE BUTT PAD WITH MONOPOD** £205.00
 Ergonomic butt fully adjustable to suit all shooters. Ideal for competition use in the field.
- RACE RAIL TWIN-CLAMP SCOPE INTERMOUNT** £75.00
 An M-Form to fit alloy optic rail with a 0.2 degree tilt to aid mounting that is designed to fit the Alpha Wolf rail system and is available in 102mm face fitting M-Form optics.
- CENM ADJUSTABLE BUTT PAD WITH ADAPTER** £220.00
 Ideal for competition use in the field. Clives fit using required adapter, no tools required.
- ALPHA WOLF / DELTA WOLF PERFORMANCE PACK** £465.00
 Saving a considerable sum off the retail if bought individually. This accessories package comprises: CENM adjustable butt pad, M-Form Race Rail, M-Form Trigger Guard and Outfit 10.
- QUICK RELEASE PORT COVER (ALPHA WOLF & RED WOLF GP)** £5.18
 Works on all current Daystate rifles fitted with a Zener style main connector. Magnetically attached.
- GO TACTICAL SLING KIT** £27.00
 A 3-point tactical blind rifle sling, complete with all elements for your rifle.
